Priority Applications (No Type Date): JP 6913942 A 19690226

Abstract (Basic): JP 72021120 B

Title dye comprises oxidation dyes that dye by oxidation of an intermediate of oxidation dyes with hydrogen peroxide or with sodium perborate, and an after-treatment agent that is made by dissolving 0.1 to 30% of persulfate in water, shampoo or rinse.

ABSTRACT

PURPOSE: To provide a hair dyeing method for dyeing black hair in clear color free from blackish color by treatment once and to obtain a hair dyeing agent used for the method.

CONSTITUTION: This hair dyeing agent comprises an agent A containing 2-50-wt.%, especially 5-2wt.% of xanthene-based dye, an agent B containing 2-6wt.%, especially 5-6wt.% calculated as H(sub 2)O(sub 2) of hydrogen peroxide and/or a hydrogen peroxide generating part and an agent C containing a persulfate. The agents A, B and C are mixed in the ratio of 0.1-5 pts.wt. of H(sub 2)O(sub 2) contained in the agent B based on 1 pt.wt. of the xanthene-based dye in the agent A and 0.5-8 pts.wt. of the persulfate contained in the agent C based on 1 pt.wt. of H(sub 2)O(sub 2) contained in the agent B and the mixed solution is used to dye hair. The pH of the mixed solution is ≥ 7 and preferably 8-10 and is controlled by the amount of an alkali substance to be mixed with the agent A and/or the agent B.
